## Evening Brief

Date Stamp: Friday July 14, 2017

---

### Weather Summary

...HIGH RISK for Scattered Thunderstorms Today Northeast NV...

...HIGH RISK for Increasing Thunderstorms This Weekend across Nrn NV /Srn ID / Nrn UT...

...HIGH RISK for Gusty Winds/Low RH Monday in Western NV...

Today, moisture will continue to produce scattered thunderstorms in a narrow band across Ern NV and possibly into far NW Utah. We have issued *High Risk* for much of northeastern Nevada for today, where storms will not be quite as wet as further south.

Moisture increases further this weekend with greater lightning coverage Saturday over the northern half of Nevada into Southwest ID, then shifting into the central and eastern half of Nevada, Northern Utah and Southeast Idaho on Sunday. We have issued *High Risk* for much of this area (see chart and maps). Lightning will continue Monday across Utah/Southeast ID/WY, however moisture may increase with some increased RH and wetting rains. Thunderstorms may decrease in coverage over the Eastern Great Basin by the middle of next week, however, thunderstorms will increase again to the north and west later next week.

Winds will increase Monday with low RH over western NV and *High Risk* has been issued for these conditions.

---

### Preparedness Levels

#### Current:

Great Basin	4
National	4

---

#### Great Basin Fire Activity (from Irwin): Moderate Activity

New Fires and Acres: 34 fires for 16,802 acres. 12,025 acres large fire growth.

---

### Resources:

- Crews: 19 T1 IHCs in GB: 1 available, 15 committed, 3 on R&R (2 available off R&R 7/15).
  - T2 IMT (NWCC) – Goff is committed to Roosters Comb fire.
  - T2 IMT Team 6 – Chadwick committed to Farad fire.
  - T2 IMT Team 7 – DeMasters committed to Brianhead fire.
  - T2 IMT Team 3 – Rohrer committed to Draw fire.
  - T3 IMT Thaler - Unavailable.
  - Local IA resources are at drawdown for UT and NV.
  - GBCC has committed an estimated 120+ type 3, 4, 6 engines.
  - 1-T1 and 0-T2 helicopters are available in GACC.
-

## Great Basin Fire Potential Summary

Fuels continue to **moisten** across southern and eastern UT, the AZ Strip and parts of Srn NV with the recent trend towards wetter showers and thunderstorms in those areas. ERC's are on the downward trend over these areas, especially UT and the AZ Strip with a more gradual decline over southern NV.

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, remain dry across the northern and western areas of the Great Basin with continued hot and dry weather. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs continue to increase and are above the 70th percentile in some areas.

Sagebrush live fuel moisture has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Thus with the live fuels dropping to these levels, combining with the very dry and abundant cured grasses, we have seen increased fire growth and in some cases extreme fire behavior. This is what we have been warning about for the past several months. Sagebrush live fuel moisture across Central/Srn NV/Utah has dropped significantly to below normal and in some areas is approaching record lows. Live fuel moisture will likely increase across southern Utah as monsoon moisture remains mostly in place.

We have issued a Great Basin **Fuels and Fire Behavior Advisory for Nevada and Utah**
